More than just standard. Tool Trolley No 90.

1

Tool Trolley No 90 is the perfect, mobile storage system for your tools. Key features are the resilient worktop made of ABS plastic and drawers mounted in full-extension runners. The overall design and paint finish in RAL 7016 blend in harmoniously in any production or workshop environment.

1

Particularly tough, oil and Skydrol resistant worktop made of ABS with compartments for small components.

2

Two-stage safety logic:

- Central locking with a cylinder lock and fold-down key.
- Individual locks prevent inadvertent opening in transit.

3

Sturdy push-bar.

4

Six locking, easily removable drawers mounted in full-extension runners. Can be enhanced with STAHLWILLE Standard and TCS inlays.

5

Oil and acid resistant wheels (\varnothing 100 mm) with one parking brake.

Robust. Compact. Safe.

Tool Trolley No 95.

Model 95 provides even greater security and durability. The stainless steel handle with reinforced connections to the main body and wrap-around bumpers make it extremely robust. A further feature is the three-stage safety logic with central and individual locking together with a topple-proof mechanism to ensure maximum safety.

- 1** Three-stage safety logic:
 - Central locking with a lateral cylinder lock and fold-down key.
 - Individual locks prevent inadvertent opening in transit.
 - Topple-proof - it is not possible to pull out more than one drawer at a time.
- 2** Impact protection strips with wrap-around bumper.
- 3** Easily removable drawers mounted in full extension rails with bearing cage guidance.
- 4** Perforations from both sides for Hooks No 8031-8041, e.g. for larger tools.
- 5** Oil and acid resistant wheels (∅ 125 mm) with two parking brakes. Carpet protection prevents the ingress of dirt and threads into the bearings.

Individual needs

Five colour shades and options for 6, 7 or 8 drawers are available for Tool Trolleys 95, 95VA and 98VA.

Good is now better. Tool Trolley 95VA.

Using Model 95 as a starting point, we have enhanced many aspects of the design to produce Tool Trolley 95 VA. The worktop and lower protective base strip made of stainless steel are particularly durable and resistant to scratching. Being able to label the drawers also makes it that much easier to locate tools quickly.

Professional tidiness

With capacities of approx. 9 l (AB 95) and 14 l (AB 98) respectively, these convenient containers provide ample room for waste. Optional for Models 95, 95 VA (AB 95) and 98 VA (AB 98).

The definitive version. Tool Trolley No 98VA.

If you need a larger worktop and more space for storing tools and parts, the 98 VA trolley will fit the bill. With twice the drawer capacity compared with Models 95 & 95 VA, and a much more generous worktop made of stainless steel, this model provides plenty of room. The TCS compatible drawers are particularly high-grade and can take loads of up to 40 kg each.

CONVERTA

The system and its components

1

The CONVERTA system and its components are a modular system. The system consists of wheely boxes with drawers or up-and-over doors, magazines with integrated carrying handles, magazine drawers and magazines and a set of wheels, and detachable spray-can holders. Thanks to the possibility of combining the many modules available, there are almost no limits to the options open to the user in optimising his or her individual tool-storage environment.

All the magazines are positioned on flat magazine drawers which can be locked in place when extended. The tool magazines and standard drawers are interchangeable. A safety mechanism prevents more than one drawer being opened at any one time.

All the boxes can be fitted with a cylinder lock to enable central locking. The boxes can still be locked even if one or more magazines or drawers have been removed. All painted parts have an environmentally friendly powdercoat. The worktops of the cases are fitted with an oil and skydrol resistant plastic mat with compartments for small components. The undersides of the magazines have non-slip film attached to them.

The modular tool tray system. **Standard – the perfectly organised workshop.**

Tool trays from STAHLWILLE ensure perfect tool management within the Tool Trolley or Tool Box. All the tools are neatly arranged and instantly at hand, and always securely held in the same place. The Tool Trolley or Tool Box can be equipped as required with 1/6, 1/3, 2/3 or 3/3 inlays.

Wherever large numbers of tools are in constant use and rapid, unhindered access is paramount, the inlays in this tried-and-tested modular STAHLWILLE system provide the security and efficiency required for smooth workflows and reliable quality. The drawers of the Tool Trolleys can be optimally used if a number of spare inlays are kept in store to enable the perfect “for task” combination of tools. In addition, these inlays are made of skydrol resistant and permanently oil resistant engineering plastic and the sculpted cut-outs protect your high-grade, expensive tools.

The modular tool tray system. **Tool Control System – built-in safety.**

1

Initially, the TCS Tool Control System was developed by STAHLWILLE in conjunction with British Aerospace for the aerospace industry with a view to improving safety. Today, the system is appreciated by employees in the automotive industry and other fields of industry and the trades for its convincing benefits. The system guarantees a high level of organisation and security, protects high-grade, expensive tools from damage and is ideal wherever large numbers of tools are prone to “disappear” – in other words, a real value-for-money investment that will soon pay for itself.

The advantages at a glance:

- With our Tool Control System, the tools are arranged in chemical-resistant special foam inlays with milled three-dimensional cut-outs.
- The signal colour is yellow. A glance is enough to see whether all tools are in their correct places: if you can see yellow, there is something missing.

1 The milled cut-outs for each tool are individually shaped using computer technology to provide each tool with a secure place. Easy to remove thanks to additional recesses.

2 The milled cut-outs enable you to see at a glance where each tool goes. Saves time and money.

3 The inlays are chemical-resistant and extremely flexible.

4 Two-layer, two-colour plastic inlays: the upper half is black and the lower layer is yellow.

Strong, extremely tough and durable. **STAHLWILLE spanners**

2

1

Conventional spanners

When force is applied to a spanner, the greatest force acts on the joint between the jaw and the shaft. Standard-quality open-jaw spanners do not take this fact into consideration. In the context of normal hard work, this can lead to the tool breaking, causing considerable personal injury.

STAHLWILLE spanners

To reduce the danger of breakage, we add more material where the greatest loads are to be found and take it away from the places that are not under such stress. In this way, we are able to manufacture extremely sturdy, slim and light tools which also facilitate working in confined spaces due to their compact designs.

2

Extremely resilient, remarkably durable

- Drop-forged from high-grade special steels.
- Optimum hardening in continuous furnaces with no scale build-up or skin decarburisation.
- Gentle quenching in oil.

3

Light and easy to handle

- High resistance to bending and low weight thanks to STAHLWILLE's typical double-T profile.
- Snug-fitting, skin-friendly surfaces thanks to STAHLWILLE's rounded finish.

4

Key benefits when tightening and loosening screws

- Tougher than any bolt thanks to the forged double hex.
- Thinner than conventional rings - facilitating work in confined spaces.
- Higher than standard nuts - prevents the spanner jamming on the nut.

5

Quality assured

STAHLWILLE's Quality Assurance System was awarded an internationally recognised certificate in accordance with DIN ISO 9001 by the DQS (German Association for the Certification of Quality Assurance Systems).

Reproducible and identical -
tailored and perfectly

4 Resistant to bending thanks to the double-T profile

5 Snug-fitting, skin-friendly surfaces thanks to STAHLWILLE's rounded finish

Provide guaranteed safety and efficiency. **STAHLWILLE sets of socket spanners and inserts**

The professionals in industry and the trades are under pressure to work quickly, accurately and economically. Which is why they make heavy demands on their tools. Due to the numerous technical innovations incorporated in them, STAHLWILLE ratchets and sockets make a valuable contribution to the prevention of both mistakes and injuries.

By using ratchets, adaptors and inserts made by STAHLWILLE, professional technicians are quite simply "making sure". It does not matter whether it is a full set of tools or individual components - users can be sure they will get top-of-the-range quality every time. This is guaranteed by adherence to the closest tolerances during production and stringently applied quality assurance measures in accordance with DIN EN ISO 9001. The legendary reliability and precision of these tools is enhanced by a large number of user-friendly features.

- Non-slip, ergonomically manufactured 2-component handles facilitate strain-free working.
- Slim-design sockets enable access to awkward places.
- The QuickRelease system ensures full control over the joint between the ratchet, the adaptors and the sockets.
- STAHLWILLE tool cases are particularly resilient thanks to the robust ABS plastic used. They are shaped for safe stacking and the integrated handles make transport easy. Convenient feature: on the inside of the cover is a list showing the contents of the case.
- Sculpted chemical-resistant cut-outs in special PE foam inlays prevent tools rattling and sliding around.

3

Light, robust, stackable: STAHLWILLE plastic cases. The inside of the cover shows the contents of the case.

- 1** Ergonomically designed 2-component handle made of impact-resistant, skydrol resistant plastic.
- 2** All metal parts are made of high-grade steel (Chrome Alloy Steel, chrome plated).
- 3** Firm seating and yet easy release of sockets and adaptors.
- 4** Wear parts can be easily replaced using sets of spares for sockets.
- 5** Ergonomic pawl to switch from clockwise to anti-clockwise.

Safety advantage 1

STAHLWILLE QuickRelease system

The problem: imagine what happens if a tool falls into an inaccessible place during repair or overhaul work.

The consequences: arduous, costly search and recovery, possibly involving disassembly of an aeroengine or machine.

The solution: the safety lock built into the QuickRelease system prevents damage to workpieces and guarantees secure, rapid connection of all individual components to form a single combined unit. Nothing can get lost because it is not possible to inadvertently release a tool. To release a tool, it is first necessary to press the release button deliberately. Even if you have oily or greasy hands, attaching and separating the individual components is so simple it noticeably smoothes your workflows.

Safety advantage 2

STAHLWILLE AS-Drive

The problem: removing heavily corroded or thermally set fasteners requires the application of considerable force. The socket slips off the head of the fastener.

The consequences: uncontrolled movements cause injuries and damage to both the workpiece and the tools.

The solution: STAHLWILLE sockets are equipped with the AS-Drive* profile. This permits high transmission of forces to the lands of nuts and bolts without damaging them. The risk of injury is minimised and the corners of the fastener heads and nuts are no longer damaged.

*AS-Drive = Anti-Slip-Drive

Safety advantage 3

STAHLWILLE HPQ®-inserts

The problem: although there is hardly enough room to move, you still have to apply considerable torque to loosen a stubborn threaded fasteners.

The consequences: many of the sockets available are useless simply because their wall thickness makes them impracticable in awkward places.

The solution: STAHLWILLE HPQ®-sockets are manufactured from selected tough steel alloys. These sockets will not slip off the head of the fastener, nor will they stretch when subjected to heavy loads. Their extremely thin walls and unbelievably high load capacity are simply exemplary. HPQ®-sockets are free of cadmium and are therefore suitable for use on titanium alloy parts and titanium fasteners as used e.g. in the aerospace industry, where safety is a crucial factor. They meet these aerospace standards: E DIN EN 3709, E DIN EN 3710, SAE AS 954-E, S.B.A.C. AS 40605/40606, MS-33787, MIL-W-8982.

* = High Performance Quality

Safety advantage 4

Fine-tooth ratchets without screws or rivets

STAHLWILLE is the first manufacturer to offer a complete product family of particularly efficient fine-tooth ratchets. Eighty teeth generate an extremely tight ratchet angle of only 4.5°, which enables comfortable working in confined spaces.

The screwless construction, compliant with FOD requirements, make these models the preferred choice for use in safety relevant applications, such as aerospace.

IMPACT Sockets, Machine actuated. **STAHLWILLE IMPACT**

1

Tried-and-tested components for professional use in conjunction with compressed air and electric power and impact screwdrivers. All the tools in the IMPACT product range have been designed for particularly heavy-duty work on a day-to-day basis. Used as additional tools in conjunction with power impact tools they feature extremely good load-bearing capacity and very long lifetimes. The name IMPACT is a by-word in all fields of industry and the trades for leading-edge quality made by professionals for professionals.

2

STAHLWILLE IMPACT sockets are extraordinarily tough. Their remarkable fitting accuracy, which is due to very tight tolerances, guarantees minimum loss of force as the impact is transferred from the impact screwdriver to the socket insert and also dramatically improved durability.

3

STAHLWILLE IMPACT sockets are made from high-grade Chrome Alloy Steel. They are hardened in an oil bath to ensure they are normalised and non-warping, making them extremely accurate tools with very close tolerances.

4

IMPACT quality is available individually or in sets

Whatever else the professional might want in a tool, there is no compromising on the quality. The extensions, adaptors, joints and sockets will always fit - perfectly. Combine them as you need them. Slot them together. Done.

5

Joints

- 1 Deep groove for O-ring to improve grip and
- 2 straight-through central bore for locking pin.
- 3 Bevelled edge facilitates attachment and ensures optimum contact with the wrench. No mechanical loading on the retainer pin.
- 4 Recessed keyway adaptors with spring-loaded pins on the square drive, e.g. No 3116, 3216.

4

No 2309K

IMPACT Sockets, Machine actuated. **STAHLWILLE range of BITS**

1

STAHLWILLE range of BITS - uncompromisingly attractive.

Reliable screwdriver inserts and adaptors in individual sizes or as sets for power screwdrivers or manual use.

2

The bit that fits - always

That is why STAHLWILLE offers such a range of BITS for flat-bladed, Phillips®, POZIDRIV/SUPADRIV®, internal TORX®, TORX PLUS®, internal serration, internal hex drive, TRI-WING®, TORQ-SET® screws and recessed 5-star screws with a central pin - if required, also available in sets with corresponding tightening tools e.g. anticlockwise and clockwise ratcheting bit-holder. High-grade special steel alloys and special hardening processes guarantee optimum torquing and long service lifetimes.

3

Get a grip on it: sturdy bit-holders and ratchets etc.

STAHLWILLE BITS are, of course, also suitable for manual use, e.g. in conjunction with the corresponding bit-holders, ratchets, magazine holders, switchable ratchets and TORSIOMAX torque screwdrivers.

- Wear-resistant switching mechanism
- Torque range 4 - 800 N·m
- No need for manual reset to zero - wear-free flexible rod instead of a compression spring
- Can be calibrated without disassembly
- Clearly detected cut-out even at very small torque settings
- Rapid setting thanks to slide control (sizes 2 - 65)
- Display deviation value $\pm 4\%$

1

Protected mechanism, extremely resistant to mechanical wear, protected against dirt inside the outer housing

2

Easy-to-read twin scale for N·m/ft·lb and N·m/in·lb on sizes 5 - 80

3

Sturdy handle made of tough plastic, resistant to oils, grease, fuels, brake fluid and Skydrol

4

Square drive for use with a wide range of inserts (9x12 mm, 14x18 mm, 22x28 mm and 24.5x28 mm)

5

No need for manual reset to zero thanks to wear-free trigger system using triggering cam. The measuring element is only under load while force is being applied

6

Rapid setting of target torque on sizes 2 - 65.

7 Quick adjustment from outside, no disassembly of the torque wrench required

8 QuickRelease safety lock guarantees secure locking of insert tools on sizes 5 - 65 and fast removal

9 Any force applied to the tool after the 'click' or applied in the opposite direction to the current function - forcible loosening of a jammed screw - does not act on the trigger mechanism and cannot cause damage to it.

This is how to achieve the correct tightening torque - even if you are using inserts with an extension

When you tighten fasteners using inserts whose extension length S deviates from the standard length S_F , it is necessary to recalculate the setting/display value for the torque wrench in use.

Caution! If adapters are combined with inserts or special tools, use the sum of the extensions = ΣS . Where the special tool is angled to the side, W_k will have to be determined empirically.

$$W_k = \frac{M_A \cdot L_F}{L_k} \left[\frac{\text{N} \cdot \text{m} \cdot \text{mm}}{\text{mm}} \right]$$

$$W_k = \frac{M_A \cdot L_F}{L_F - S_F + S \text{ (or } \Sigma S)}$$

M_A = desired tightening torque

W = reading/setting $W = M_A$

W_k = adjusted reading or setting value $W_k \neq M_A$

L_F = functional length (see dimension table for torque wrenches)

L_k = adjusted functional length $L_k = L_F - S_F + S \text{ (or } \Sigma S)$

S = extension of STAHLWILLE inserts or special tools (see dimension table for inserts)

S_F = standard extension (see dimension table for torque wrenches)

ΣS = total of all extensions of the attached inserts $S_{\text{adapter}} + S_{\text{insert}} + \dots$

Normal situation

Torque wrench No 730N/10 combined with square drive insert tool No 734/5 and socket size 13 mm.

Required tightening torque for the screw $M_A = 40 \text{ N-m}$

Dimension table for torque wrenches: $L_F = 336 \text{ mm}$, $S_F = 17.5 \text{ mm}$
 Dimension table for square drive insert tools: $S = 17.5 \text{ mm}$

No adjustment to setting value required on torque wrench.

$\rightarrow S = S_F$
 $\rightarrow W = M_A$

Example 1: adjusted setting value (1 insert tool)

Torque wrench No 730N/20 combined with ring insert tool No 732/40 size 36 mm

Required tightening torque for the screw $M_A = 190 \text{ N-m}$

Dimension table for torque wrenches: $L_F = 424.5 \text{ mm}$, $S_F = 25 \text{ mm}$
 Dimension table for ring insert tools: $S = 28 \text{ mm}$

Note!

Torque tightening tools are measuring instruments. They must be regularly calibrated with suitable instruments and adjusted accordingly (see DIN EN ISO 6789, 5.3 Recalibrating).

STAHLWILLE angle-controlled torque wrenches.

For absolute accuracy.

For high-accuracy applications - Category A bolted connections, for example - just checking the torque is not enough. As well as the torque, it is crucial to tighten to the correct tightening angle

5

The torque reading specifies how much force was applied to tighten a fastener. For many applications, this is perfectly good enough. However, in certain cases, the additional measure of accuracy is an essential requirement. The tightening force that is generated between the workpieces in a bolted joint has to be exactly adhered to: if the force is too great, there is a risk of breakage. If it is too low, on the other hand, the connection will not be firm enough and may lead to failure in the assembly under normal operating conditions. Since the tightening force is dependent on the tightening torque and the angle, measuring equipment that can measure both quantities exactly is required. For applications of this kind, STAHLWILLE has precisely the solutions industry needs.

- **Accurate control:** Uncertainty is reduced to a minimum to guarantee accurate readings.
- **Higher quality bolted connections:** Including the tightening angle as the second measured quantity makes the bolted joint even more secure.
- **Perfect procedures:** Easily readable, unmistakable displays and automatic switch-over to angle-controlled measurement once the target tightening torque has been reached – key features in efficient, safe work practice.
- **Excellent economy:** Thanks to the considerably extended measuring range, every angle-controlled torque wrench can replace as many as four mechanical torque wrenches (two indicating and two clicking), which simultaneously reduces the costs of maintenance, calibration and adjustment. All these models are suitable for clockwise and anticlockwise tightening.
- **Better monitoring:** All our angle-controlled torque wrenches have a logging function. Using the corresponding software (in some cases this is an optional extra), it is possible to read out programmed, stored readings and archive them on the PC – for example by the serial number of the tool, date and timestamp of the tightening operation, target torque and angle and the torques and angles actually recorded.

MANOSKOP® 730D

Electromechanical torque wrench

Benefits at a glance:

- Indicating and click-type
- Displays the torque actually applied after the wrench cuts out. In this way, the user has the opportunity to optimise his or her working methods.
- Units of measurement: N·m / ft·lb / in·lb
- Automatic keypad lock
- Display also works for anticlockwise torque
- Angle-controlled measurement without a reference arm using a supplementary module
- Overload protection by means of acoustic and visual signals
- Automatic compensation to achieve correct tightening torque even if a changed extension is entered
- Different tolerance limits can be set for each joint
- Visual red and green signals in the display confirm the status of the joint
- Additional security for presets using PIN code
- Automatic notification of the next calibration date
- Deviation of indication $\pm 2\%$

Measure, cut-out and record: When the preset torque is reached, the torque wrench cuts out and indicates this fact to the user via a definite tactile and audible signal. The tightening torques are stored. The data can be transferred to a PC for evaluation and documentation.

7380N/7385N Torque angle gauges

for angle controlled bolt/screw tightening, with static read-off point. Read-off possible from any angle thanks to a pair of angled scales. Removable magnet for attaching sockets with 1/2" internal square drive. For use in conjunction with tightening tools such as Service MANOSKOP® No 730N. Since this tightening method requires a pre-determined snug torque to be applied, it is essential to choose a torque wrench covering both snug torque as well as maximum torque required to reach the recommended tightening angle. Whether 1/2" or 3/4" sq.dr. Torque Angle Gauge is used depends upon the square drive of the appropriate torque wrench employed.

7161 QuickRelease safety lock

prevents insert tools being swapped. The system is locked in place on the head of the torque wrench by means of a safety screw. Once the protection system has been fitted, it is possible to attach an insert tool but not to remove it because the QuickRelease unlock button itself is locked. After the safety screw has been removed, the torque wrench reverts to being a standard, versatile tool.

The safety screw can be fitted and removed using a TORX® screwdriver with a central bore in the tip (No 4656, Size T20, Code 46 56 00 20) or a BITS screwdriver insert with a central bore in the tip (No 1442, Size T20, Code 08 16 00 20).

MULTIPOWER

Makes child's play of the largest torques.

MULTIPOWER – or really “tough work”.

STAHLWILLE MULTIPOWER torque multipliers with planetary gears take the fatigue out of tightening or loosening stiff or large bolt connections. A long lever is not necessary.

STAHLWILLE MULTIPOWER multiplies human strength; steady torque transfer is easy on nuts and bolts. Even the largest torques are transferred with ease and precision over long periods.

Accordingly, construction materials and workmanship are extremely robust.

When combined with STAHLWILLE torque wrenches, MULTIPOWER really shows its strength.

The MULTIPOWER range extends to 5000 N·m/3687 ft·lb.

MULTIPOWER tools are also available on request up to 12000 N·m/8850 ft·lb.

The MULTIPOWER from 2000 N·m are fitted with an anti-backlash device.

Spare parts, see p. 223.

Electronic torque tester for torque wrenches **SENSOTORK® 7707 W** (For complete calibration systems, see p. 227, 231)

Compact torque tester for easy adaptation by replacement of the transducers.

High degree of accuracy thanks to flat transducer and conversion and digitalisation of readings within the transducer (see p. 225).

High degree of safety through display showing actual torque read-off where clicking torque wrenches are used.

7707 W Torque tester **SENSOTORK®**

Electronic torque tester for torque wrenches, consisting of:

- transducer, patent
- holder
- display unit (registered design)
- tripod for display unit (with 1.5 m cable)
- spiral cable
- mains adaptor (110 V-230 V with interchangeable socket adaptors) or direct connection to 12 V in-car supply is possible
- square drive adaptor (No 7707-2W, No 7707-2-1W, No 7707-2-2W, No 7707-3W)
- kit for attaching the unit to a workbench or wall in a horizontal or vertical testing position for clockwise and anticlockwise use. Units of measurement: N·m, ft·lb, in·lb.

The easily interchangeable transducers are attached to the holder by means of a QuickRelease safety lock. Low lateral forces thanks to low-profile transducers, automatic detection of the transducer, flexible and user friendly because the unit can be used horizontally or vertically and the display unit can be placed in many positions, additional tripod with 1.5 m cable for mounting the display unit to facilitate visual monitoring when using longer torque wrenches, especially broad measuring range from approx. 2% to 100% of rated value.

The software No 7759-4, including USB hub and jack cable (see p. 234), enables readings to be transferred to the PC for documenting and for generating calibration certificates in accordance with DIN EN 6789:2003 (no separate power supply needed, power comes from PC). While individual transducers are being recalibrated, the torque tester itself remains on-site for further use. Wide range of application (-20°C to +60°C). Complies with DIN 51309: 2005, Class 2 and DKD-R 3-8: 2003. With certificate. Supplied in sturdy plastic case.

¹⁾ for calibrating torque screwdrivers

²⁾ for use with mechanical loader No 7792 and 7792-1 (see p. 229)

Note!

Torque testers are measuring instruments! They have to be regularly calibrated and, where necessary, adjusted, using suitable calibration equipment. We recommend recalibrating every 12 months.

Accurate. Reliable. Safe.

STAHLWILLE calibration

Calibration - Calibration is the regular examination of the accuracy and reliability of torque tools. This is done using special-purpose calibrating equipment which is subject to stringent monitoring. This is essential because torque tools are precision instruments which are very often in use in safety-relevant environments. They are expected to provide the same level of accuracy in their readings reliably over long periods of time. In order to ensure these standards are guaranteed, it is essential that examination by means of calibration takes place at regular intervals and is documented.

At the very least, a calibration system must include the following components:

1

Mechanical loader - The mechanical loader is required for rapid, accurate fixing and operation of the torque wrench. The mechanical loader also ensures that the DIN EN ISO 6789 requirement for clicking torque wrenches is fulfilled, i.e. that, above 80% of the final torque value, the force is applied slowly and steadily within a period of 0.5 to 4 seconds.

2

Transducer - The torque applied using the torque wrench is digitalised within the transducer and transmitted via USB cable to the PC, which ensures error-free transmission.

3

USB-Adaptor - From here, the data are transferred to the PC.

4

Cable - for connecting laboratory transducers No 7728 to USB adaptor, with jack plug and self-locking precision plug.

5

Square drive adaptor - The set includes the square drive adapters necessary to make full use of the measuring range of the transducers; e.g. for transducer No 7723-3 (internal square drive 3/4"), square drive adapter No 7787 (1/4" female to 3/4" male), No 7788 (3/8" female to 3/4" male) and No 7789 (1/2" female to 3/4" male).

6

Software - The data received in this way can then be used to issue a calibration certificate in accordance with DIN/ISO 6789.

Mechanical loaders for torque wrenches and torque screwdrivers

Thanks to the modular design, end users can put together their own mechanical loader according to their specific requirements. Extensions with additional components are possible any time. All the components are carefully matched to ensure compatibility and can be easily fitted. This slot-in system is easy to use and has a very accurate fit. The components can be quickly and easily locked together using the integrated screw joints. The display unit can be attached at various points of the system via a holder. In this way, every user can organise his or her work to suit themselves.

7791 Mechanical loaders up to 400 N·m

Measurement possible without moving the point of application of force.

Thanks to a specially designed force transmission system, mechanical loader No 7791 avoids the risk of the point of force application shifting during the calibration process. The lever below the test rail is actuated in a linear direction by the handwheel acting on a spindle. The linear motion is translated into a rotary movement which acts on the transducer. The torque wrench to be calibrated remains in the same position throughout the calibration process. This prevents measuring errors caused by the point of force application being moved. Thanks to a low-friction linear ball bearing, the torque wrench is automatically levelled as it is placed in the unit. A further linear ball bearing ensures the contact with the torque wrench is friction-free. The reduction in lateral forces acting on the transducer and in the friction on the point of contact with the torque wrench results in a corresponding reduction in mismeasurement. STAHLWILLE DAKkS calibration laboratory

You can ensure controlled tightening, record the results of tightening processes, monitor torque tools.

STAHLWILLE's DAKkS calibration laboratory for torque is accredited by the German Accreditation Body (DAKkS) in accordance with DIN EN ISO/IEC 17025: 2005. Which means the specific requirements listed in Technical Specification ISO/TS 16949 relating to testing laboratories are met. Absolutely essential: This is absolutely essential to all suppliers in the automotive sector!

The transfer torque wrenches and torque transducers in use at STAHLWILLE's DAKkS calibration laboratory are subject to regular examination by the German Federal Physics Institute (PTB) in Braunschweig. The accuracy of the torque wrenches must be proved in a series of steps and these must be traceable. Only in this way can the reliability of the readings be guaranteed. During the first stage, the end-user checks the accuracy of the torque tools in-house using suitable calibrated testing equipment. At the next stage, this test equipment is checked in STAHLWILLE's DAKkS calibrating laboratory. This accreditation by the German Accreditation Body (DAKkS) in accordance with DIN EN ISO/IEC 17025: 2005 guarantees the direct link between the measuring equipment and the national standard as laid down in DIN EN ISO 9001: 2008.

Great freedom of choice – DRALL+ screwdrivers

A new challenge every day, a new tool every day to meet that challenge. The **DRALL+** series was developed for professionals faced with new challenges on a daily basis. Development focussed on three crucial user requirements: durability and reliability, safety in use, pleasant to handle. These requirements are met in full by **DRALL+** screwdrivers – in fact, they feel so natural, you will hardly notice them.

The profiles

DRALL+ is available for the following screwhead profiles:

- ⊖ Slotted
- ⊕ PH cross-head
- ⊕ PZ cross-head
- ⊕ TORX®
- ⊕ TORX® Tamper Resistant with a central bore
- Hex
- ⊕ TORQ-SET®

4 handle sizes

The handle sizes for the **DRALL+** screwdrivers are designed specifically to match the drive profiles.

6

1

The hand-stop helps to stop injuries – Flange-like design. Supports your hand in the direction of the blade to prevent it slipping off the handle. Features integrated anti-roll shape.

2

The multifunctional section – The lower end of the handle is deliberately made extra-long. This enables the thumb and index finger to wrap around more easily and spin the screwdriver.

3

The transmission zone – The rounded cross-section in the central area combines maximum grip and easy turning.

4

The elastic handle components – The soft rubber textured thermoplastic elastomer (TPE) fits snugly in the hand. These sections are injection moulded around the hard core and bonded to it inseparably.

5

The firm handle components – The green zones are made of high-grade, impact-safe polypropylene (PP). The tang is anchored in the core to allow force to be transferred through it.

6

Impact-resistant cap – For use under extreme conditions, the **DRALL+** is also available with a metal impact cap.

VDE insulated screwdrivers: High-grade materials and durability testing guarantee absolute safety when working on AC systems up to 1000 V (effective voltage) or 1500 V DC.

The power is where you put it with the **3K DRALL®** screwdriver series

The efficiency with which you use a screwdriver in your daily work, and the safety with which you work, depend to a large extent on the quality of the tool. It is not just the use of high-grade materials but also the shape that matters - in particular the shape of the handles - if you want to stay in control. STAHLWILLE's **3K DRALL®** screwdrivers unite these positive qualities in a manner which is close to perfect. The result is a longlife, ergonomically designed tool providing easy working combined with maximum force transmission - even with greasy hands.

3K DRALL® screwdrivers are available in sets conveniently positioned in plastic inlays or TCS safety inlays, designed for use with STAHLWILLE Tool Trolleys and Tool Boxes.

6

- 1** **3K DRALL®** handles are made up of 3 components:
1st component - Extremely resistant, impact-safe core made of black polypropylene (PP).
- 2** **2nd component** - Soft, heat-bonded inlay made of easy-to-grip thermoplastic elastomer (TPE).
- 3** **3rd component** - Two large surfaces coated with special fibres, resistant long-term to solvents to improve force transmission and work safety.
- 4** **Additional Tommy-bar hole** - When things get really tough, the additional Tommy-bar hole will cope with a fair amount of torque.

Blades - Made of high-grade Chrome Alloy Steel. Through-hardened. Anchored firmly in the haft due to the extra-wide, forged tang. High resistance to bending.

Tips - Black, extremely tough, retain their shape. Whether you use the straight-bladed or Phillips type - the crosshatched blade tips will accurately transmit maximum force to the screw head.

Accurate. Strong. Dependable. **STAHLWILLE** pliers, cutters and wrenches

For accurate work and a powerful grip – with comfy-fit multi-component handles.

When you are working with pliers, your hand needs optimum support and protection in the places where the pressure exerted on the hand is felt most keenly – through ergonomic handle design. STAHLWILLE has integrated softer layers in these sections of the handles. In this way, they fulfil two important functions. They prevent the hand slipping off the handle and, at the same time, absorb the shock produced when hard wires are cut. Even with oily or greasy hands, the textured surface ensures you still have a good grip on things. The special plastic we have used is also resistant to aggressive fluids and, at the end of the lifecycle, can be properly disposed of, because it does not contain PVC.

7

1

Accurate gripping! By using high-grade materials and applying our sophisticated manufacturing techniques, we are able to achieve remarkable accurately shaped jaws.

2

Clean, effortless cutting! Thanks to specially hardened, high-precision cutters.

3

Strain-free working and longer tool lifetimes! Thanks to smooth-action lap-joints.

4

Prevents injuries! The anti-slip protection prevents your hands slipping off towards the jaws.

5

Longer tool lifetime and resistance to aggressive fluids! Thanks to impact-resistant, extremely hard-wearing special plastic.

6

No pinch marks and strain-free working! The ergonomically positioned softer layers improve force transmission.

Various Cutting Pliers

6660 Steel fixers pincers

DIN ISO 9242, limit on opening angle to ensure single-handed closure (registered design), little effort required due to optimised cutter geometry, induction-hardened cutters provide excellent resistance to wear, special steel, drop-forged, oil hardened

6662 Heavy Duty steel fixer pincers

DIN ISO 9243, induction-hardened cutting edges, high wear resistance, extremely low cutting force effort due to very large lever effect and optimum cutting edges geometry. Clearly damped cutting shock due to "elastic" pliers body, therefore ideal for continuous use special steel.

Ultra-slim design, ideal for binding recessed reinforcing bars. Special steel, drop-forged, oil hardened.

1,000 volts – no problem. STAHLWILLE pliers and cutters

STAHLWILLE VDE pliers & cutters are manufactured to meet the current demands of EN 60900 and are individually tested. They are designed to provide maximum possible protection when the user is working with voltages of 1,000 volts AC.

7

1

Voltage testing

All STAHLWILLE VDE pliers and cutters are tested to AC 10,000 volts and are certified up to 1,000 volts. In other words, with a tenfold safety margin.

2

The electrical insulation

After being submerged in water for 24 hours, the pliers and cutters are subjected to 10,000 volts AC and, at the same time, the leakage current is measured for three minutes. There must be no dielectric breakdown or arcing.

3

Testing resistance to fire

The danger of fire can only be combatted through the use of non-flammable PVC. During the test, the flame on the handle must not exceed a height of 120 mm within 20 seconds.

4

Pressure tests

When they are subjected to a load of 20 N·m and a temperature of 70°C, there must be no dielectric breakdown or arcing when the tools are subjected to 5,000 volts AC.

5

Cold impact tests

The insulated handles are subjected to 2 hours at -25°C in a freezer and must still be tough enough not to shatter or break when knocked.

6

Testing the adherence of the PVC coating

The handles must still be firmly attached to the tools after about 168 hours in a heat cabinet at 70°C. This stripping test on the PVC covers is carried out for three minutes at 500 N.

Original STAHLWILLE pipe and tube tools

These extremely robust pipe cutters guarantee accurate cutting without the danger of the cut running off at an angle. Pipes can be directly passed on to the next processing stage.

EXPRESS Pipe Cutter No 150

Ideal for pipes made of steel, copper, brass, light alloy and hard plastics. This tool is available in two sizes to cover outer diameters from 6 to 63 mm.

Essential product advantages when cutting pipes with STAHLWILLE pipe cutters:

Straight-line cutting

STAHLWILLE EXPRESS pipe cutters ensure a perfectly perpendicular cut. The broad support rolls ensure that the cutting wheels are accurately guided throughout the cut. In this way, the cut cannot run off at an angle on the pipe surface or enter the pipe at a tilted angle.

The robust drop forged upper-jaw section with its reinforced cutter-wheel guides prevents spiral cuts.

Deburring and chamfering

The wide guide rolls flatten the burr created during the cutting process back into the material. Separate deburring is not required. The cut-to-length pipe is automatically chamfered and can be passed directly to the next processing step. The cut edge is angled in accordance with the cutting wheel geometry.

Universally applicable - Work on pipes in situ

STAHLWILLE EXPRESS pipe cutters can also be equipped with three cutting wheels. This enables extremely efficient work on pipes in situ involving only a small angle of movement.

METAL Pipe Cutter No 153

This light-weight, extremely convenient tool is specially suitable for cutting tubes made of copper, brass, light alloy or hard plastics and for thin-walled steel tubes with outer diameters of from 3 to 35 mm and maximum cutting depths of 2.5 mm. The integrated internal three-bladed cutter in the handle removes burrs.

Midget tube cutter No 155

For pipes and tubes made of copper, brass, light alloy, hard plastics and for thin-walled steel tubes with outer diameters of from 3 to 16 mm where the maximum cutting depth is 2.0 mm - we recommend this extremely compact and accurate tube cutter.

Chain Pipe Cutter No 157

Special pipe cutter, infinitely variable, with rotating handle, also for cutting stainless steel pipes with wall thicknesses of up to 1.8 mm and outer diameters of from 25 to 75 mm. Chain lengths up to 270 mm.

STAHLWILLE cutting wheels for steel pipes

Especially high-grade, wear-resistant steel enables extraordinarily high cutting force. The cutting wheels are made of very tough special steel which guarantees long service lifetimes.

STAHLWILLE Double Flaring Tools No 165N

Double Flaring Tools are used for making permanent connections between pressurised pipes. DIN standard double flares in accordance with DIN 74234 can be made with this convenient easy-to-use and tough tool made by STAHLWILLE to create safe connections (e.g. in car brake leads) without the need for special skills. Simply clamp the tool in the vice - and it is ready for use. This tool guarantees rapid, safe processing of seamless drawn and double-walled rolled pipes (Bundy®) with wall thicknesses of 0.7 or 1.0 mm with a single flaring bit.

Double flaring tool

This simple-to-use STAHLWILLE Double Flaring tool will form accurate flares (to DIN 74234) on seamless drawn- and double walled (BUNDY®) tubes.

Clamped in a vice, the tool is instantly ready for use. Flaring and Pressure Cones are quickly changed.

The robust construction of the tool, plus the shape of Flaring cones, enables single cone flaring on tubes of 0.7 or 1.0 mm wall thickness.

Tubing is held horizontally by 25 mm wide Clamping blocks. This is important when endless tubing is used. A distance pin controls length of tube required for flaring.

STAHLWILLE Pullers

1

Designed with practical applications in mind, drop forged, precision machined on the latest machine tools, hardened and tempered. STAHLWILLE pullers are conscientiously assembled and tested under load. They are ideal tools for removing gearwheels, ball bearings and pulleys from shafts, axles etc.

2

Product benefits at a glance

- high flexural strength thanks to struts with accurately calculated profiles and milled, smooth guides.
- highly load-bearing extractor hooks made of oil-hardened chrome vanadium steel with milled-profile jaws and specially-designed grip geometry for use in confined spaces and optimised radii for shafts and axles.
- smooth running and high force transmission through the nut with its hard-wearing, smooth thread contours.
- high extraction force with ease is made possible even where there is high friction and counterforces due to the CNC milled precision thread.
- damage to the thread of the nut is effectively prevented, even if the full length of the thread is used, due to the clearance at the end of the thread.
- excellent running characteristics of the thread itself thanks to high-grade hardening and tempering and the special coatings on the thrust spindles.
- to enable stubborn parts to be loosened, it may be necessary to tap the puller with a hammer after it has been tensioned. For this reason, the spindle head is equipped with a rounded impact head.
- close-tolerance, performance-matched jaw sizes on the spindle head ensure non-slip contact with the drive tool.
- to prevent damage to the shafts while extraction force is applied, the centre is freely-swivelling.

3

Numerous pullers are available for different applications:

Standard pullers, battery terminal pullers, ball joint separators, internal pullers, counter stays, separating fixtures, wheel hub pullers.

4

After attaching and locking the puller No 11060/11061 **1**, the central threaded spindle **2** is turned to ease the bearing off its mount without causing damage.

Standard pullers
Two- or three-armed puller? A three-armed puller is generally preferable to a two-armed one provided there is sufficient space because it distributes the pulling forces more evenly.

Pullers

11050 Standard pullers

two-armed, with sliding permanently parallel extractor hooks, zinc plated; for extracting gearwheels, ball bearings, pulleys and similar parts from shafts or axles; for removing ball bearings, bearing outer races and bushes from holes; hooks can be used as internal or external hooks.

STAHLWILLE special automotive tools

Together with leading automotive manufacturers, STAHLWILLE develops special-purpose tools and brand-specific sets of tools. This continuous development and enhancement process covering tools for production and workshops ensures that the tools we make keep pace with the latest developments in the industry.

1

Tidy tool management: STAHLWILLE tool sets for car repairs

Carefully selected suites of tools for Tool Trolleys and Tool Boxes ensure optimised workflows. Whether it is in the garage, in production or in the pits, many mechanics welcome the benefits afforded by model and marque specific tools to guarantee safe, timesaving work.

2

Problem solver: STAHLWILLE special-purpose car pliers

Often enough, corroded or jammed parts in hard-to-reach places slow down repair and servicing jobs in the engine space. With diesels, this includes the heater plug sockets. STAHLWILLE heater plug socket pliers make it that much easier to remove and refit these plug sockets, especially when the engine is still hot.

3

Better safe than sorry: STAHLWILLE sockets

It would be hard to imagine garage and production environments without compressed air tools. Hardly surprising, then, that STAHLWILLE offer such a wide range of tried-and-tested, job-specific sockets, e. g. the wheel-nut socket with the closely-fitting plastic sleeve. This prevents damage to wheel bolts, wheel nuts and the bolt holes especially on alloy wheels.

4

The specialists: STAHLWILLE KABELEX®

Efficiency and economy in the workplace – at a time when it pays to be competitive, removing cables on vehicles safely and quickly gives you that advantage. This is why STAHLWILLE offers over 40 different cable removing tools for cars. They are available individually, in carefully selected sets or as special sets for specific vehicles. The fine but highly resistant blades are made of chrome vanadium and special spring steel.

5

Unbreakable: Special tools for car glass

The professionals really appreciate STAHLWILLE products for quickly and accurately removing and fitting car glass. Twin suction lifters and a three-component glass removal set ensure that windscreens and other car glass are easily and safely removed, fitted and transported.

6

A question of torque: Friction gauger

Setting steering systems accurately is a critical job - and adhering to torque settings and coefficients of friction is a crucial part of it. This is what STAHLWILLE created the easily-operated Friction gauge No 73Nm/15 with a range of 2-15 N·m.

7

Thick or thin: Measuring the thickness of brake discs

Checking the state of the brake discs is a valuable contribution to safety on the roads. STAHLWILLE offers a vernier calliper which enables the garage to easily check the discs in situ and compare the dimensions with the manufacturer's instructions.
